Утверждение

Speaker A

I live in the country but I've always wanted to move to a big city. I think that there are more career opportunities there, more jobs, people can get a better education and better medical services there. There is more entertainment in the city, too. You can go

to theatres, cinemas and clubs, there are lots of people everywhere – you’ll never get bored. I’ll move to the city as soon as I get an opportunity to do so.

Speaker B

I live in a big city, in a new fast-developing area. Most of the buildings were built not long ago, so the area has a modern look and is comfortable to live in. There are shops, cinemas, schools, hospitals, sports centres and parks within easy reach of my house. Right in front of my house there’s a bus stop, so I have no problem getting to the centre or any other part of the city.

Speaker

We’ve just moved house and now I live in a new modern building in the centre of the city. My window has a view of a busy street but the interior creates a nice and peaceful atmosphere. The walls are painted light green and the furniture is in warm brown and creamy colours. There’s a plasma TV and a portable audio centre. I like drawing and there are several of my pictures on the walls. I think they look nice there.

Speaker D

Everybody wants their home to be a safe, nice and comfortable place but their ideas of comfort and beauty are very different. In hot climates people sometimes make their homes underground. Living underground, however, doesn’t mean living in dark, dirty and damp caves. Modern underground homes are light. They are beautifully designed, nicely furnished and very comfortable to live in.

Speaker E

When we were walking along the main street, the guide pointed to an ordinary looking house and said that the place had a history. During the war a famous doctor lived there. He arranged a hospital in his own home and saved lots of people. Now nobody lives in the house, there’s a museum of science and medicine there. The museum has very interesting exhibits on the history of medical science.

Вариант 2

Вы услышите пять высказываний. Установите соответствие между высказываниями каждого говорящего А–Е и утверждениями, данными в списке 1–6. Используйте каждое утверждение из списка 1–6 только один раз. В задании есть одно лишнее утверждение. Запишите свои ответы в таблицу.

1. The speaker says what language he/she wants to learn and why.
2. The speaker talks about language education in his/her country.
3. The speaker explains what language he/she finds difficult to learn.
4. The speaker explains how to learn a foreign language quickly.
5. The speaker talks about the most popular language in the world.

6. The speaker explains how to teach a foreign language to children.

Speaker A

I've always been very good at languages. I can speak English and French and it helps a lot as I'm in the export business. When we worked on some contracts with Russian companies, I decided to learn Russian. I take lessons regularly and I've learned a lot of words, but there are very difficult grammar rules in Russian, and there are so many exceptions! I'm not sure I'll ever be able to speak it.

Speaker B

My friends don't think that learning foreign languages is important – English is understood everywhere. I don't agree with them. I want to start learning Italian. It's a lovely language and it sounds beautiful. I've got a pen-pal Mario, who lives in Italy, and I want to go there next year. I think Mario will appreciate my speaking Italian. And travelling is more enjoyable when you can communicate with the locals in their language.

Speaker C

English is my native language and I don't have any problems when I travel – people can speak English everywhere. That's why I don't feel motivated to learn foreign languages at school. But according to the curriculum, I must learn two foreign languages. We start learning the first one at the age of seven. Usually it's French or German. At the age of 13 or 14 we choose the second language - Italian, Spanish, Chinese or others.

Speaker D

Languages are very important in modern life. But learning languages is very difficult and time consuming. The quickest way to learn a language is to go the country where it's spoken. It works, however, only if you communicate outside the classroom a lot. Watching the news, reading newspapers and writing notes and emails helps a lot too. But the most important thing is not to speak your native language to anyone.

Speaker E

Lots of adults want to learn foreign languages but have no time for it. Children, on the other hand, have enough time but they lack motivation. The easiest way to get children to speak a foreign language is to use it in a game. Young children are not able to understand language rules, but they can easily imitate their teacher. Pictures and toys work very well too – children pick up new words for toys very quickly.

Практическое задание №4

Вариант 1

You have received a letter from your English-speaking pen friend Mary.... I'm so impressed! Last weekend our class visited the Museum of the Moving Image. We learnt about the history and magic of cinema and TV. We could even try to draw our own cartoon film! I enjoyed it very much! We also met characters from the past and asked them different questions. What was the last museum you visited? Did you enjoy it?

With love, Mary.

Write her a letter and answer the questions.

Ask three questions about the Museum of the Moving Image.

Write 100—120 words. Remember the rules of letter writing.

Вариант 2

You have received a letter from your English-speaking pen friend Andrew. ...Last weekend my father and I went fishing. It was great. How did you spend your last weekend? Does your leisure depend on the season of the year? Do you prefer to spend your weekends with your parents or with your friends? Why?...

Write him a letter and answer his 3 questions.

Write 100 — 120 words. Remember the rules of letter writing.

1. More than 80 percent of New Zealand's population are Britons or Europeans. That's why the New Zealand school system is similar to the British one. Education is free and compulsory for children between the ages of 6 and 16. The school year starts in January (after the summer holidays) and ends in December. In most schools wearing a school uniform is obligatory. For New Zealand teenagers daily life takes place in school where they stay up to the late afternoon.

2. Canada occupies most of the northern North America continent as well as some islands. It stretches from the Atlantic Ocean in the east to the Pacific Ocean in the west. It's also washed by the Arctic Ocean in the north. The country was discovered in 1497 by John Cabot, an Italian sea captain. About 2% of the Canadian territory is covered with ice. The eastern part of the country is mainly valleys and plains. The western territories are made up of the Cordilleras.

3. Most Americans simply call the Independence Day the —Fourth of July—. It always falls on this day, and it celebrates the signing of the Declaration of Independence on July 4, 1776. At that time, the people of the 13 British colonies were involved in a war which had begun in 1775. The colonists were fighting for freedom from the English. The Declaration of Independence stated it clearly. For the first time in history the colonies were defined as the United States of America.

4. With great weather, great events and terrific crowds Australia Day in Melbourne in 2010 was one of the best ever! It is a day for all Australians to get together and, in whatever way they choose, celebrate being Australian. 1788 is when the British Fleet first arrived at Sydney Cove and lifted the British flag. Now, major cities throughout the country celebrate the national day with parades, free food, and different events.

5. Cambridge lies in East Anglia, about 50 miles north of London. The river Cam flows through it. It gets the name Cambridge from the river. It's a compact green city. There is always something to do and to see in the city: walk in the parks and gardens, visit museums and galleries, enjoy the festivals or relax in small cafés. The city is best known as the home of Cambridge University, one of the world's best universities. It was founded in 1209 and it consists of 30 colleges.

Alfred Nobel

After inventing dynamite Swedish-born Alfred Nobel became a very rich man. However, he realized its destructive powers too late. Nobel preferred not to be remembered as the inventor of dynamite, so in 1895, just two weeks before his death, he created a fund to be used for awarding prizes to people who made worthwhile contributions to mankind. Originally there were five awards: literature, physics, chemistry, medicine and peace. Economics was added in 1968, just sixty-seven years after the first awards ceremony.

Nobel's original legacy of nine million dollars was invested, and the interest of this sum is used for the awards which vary from \$30,000 to \$125,000. Every year on December 10, the anniversary of Nobel's death, the awards (gold medal, illuminated diploma and money) are presented to the winners.

No awards were presented from 1940 to 1942 at the beginning of World War II. Some people have won two prizes, but this is rare; others have shared their prizes.

I. Answer the questions.

1. When did the first award ceremony take place? 1) in 1895 2) in 1901 3) in 1962 4) in 1968
2. Why was the Nobel prize established?
1) to recognize worthwhile contributions to humanity 2) to resolve political differences
3) to honor the inventor of dynamite 4) to spend money
3. In which area have people received awards since 1968? 1) literature 2) peace 3) economics 4) science
4. In how many fields are prizes given? 1) four 2) five 3) six 4) tell

II. Find the wrong statement.

- 1) Alfred Nobel became a very rich man after inventing dynamite.
- 2) Nobel preferred to be remembered as the inventor of dynamite.
- 3) Awards vary in monetary value.

4) Some people have won two awards.

ELECTRICITY.

An electric current is a flow of electricity. There are two kinds of electricity, positive and negative. Grass rubbed with silk is positively charged, ebonite rubbed with fur is negatively charged. Like charges repel, unlike charges attract. The leaf electroscope is used to detect, distinguish and measure charges. The ultimate particle of negative electricity is called the electron; that of positive electricity is called the proton.

It has been known for centuries that certain black, heavy stones have the property of attracting iron, this property being called magnetism. A body that exhibits magnetism is called a magnet. The two types of a magnet that show the strongest magnetism are called the North pole and the South pole. Magnets not only affect ordinary iron, but they affect one another. When a pole of one magnet is brought toward a pole of the second magnet, they will repel if both are north poles or both are south poles, but they will attract if one is a north pole and the other a south pole.

The region in which magnetic forces act is called a magnetic field. When placed in a strong magnetic field, iron becomes magnetized. Electricity and magnetism are closely connected. Almost all metals are good conductors of electricity, with copper being one of the best conductors of all. Glass, paper, rubber are the most common nonconductors or insulators.

According to their conductivity all materials are divided into conductors, insulators and semiconductors. A conductor owes its conducting powers to the presence of free electrons which have broken away from their atoms. The most common of them are metals, carbon electrolytes. According to their resistivity, conductors are divided into two groups: the first includes materials with low resistivity; copper, aluminium and others. These metals are used to produce wire conductors due to their high mechanical strength. The second group includes materials with high resistivity: one of these is nichrome.

Due to its good heat resistance, nichrome is used to produce heaters. Insulating materials have a very low conductivity. They offer extremely high resistance to the flow of current. Insulators are divided into gaseous, liquid, solid. They are also divided into groups according to their heat resistance. The semi-conductor is a material whose conductivity ranges between that of conductors and non-conductors of insulators. While the conductivity of metals is very little influenced by temperature, the conductivity of semi-conductors increases sharply with heating and falls with cooling.

This dependence has opened great prospects for employing semi-conductors in measuring techniques.

There are several factors that determine the electrical resistance of any wire: - the material which it is composed of; - the size of the wire; - its temperature. In more general

terms, the resistance of a wire is proportional to its length and inversely proportional to its cross-sectional area. This is Ohm's law.

Direct Current and Alternating Current.

When a cell or any other generator is connected so as to form a continuous path of conductors the electrons begin to move through conductors and this is called an electric current, an electric circuit. We know that current is the flow electricity through a circuit. If broken anywhere, the electric circuit will stop carrying a current. There are two main types of current: direct and alternating. When electrons flow in one direction only, the current is called a direct current. When electrons flow first in one direction and then in another in a periodic manner, the current is an alternating current. An alternating current is a current that changes its direction of flow through a circuit in a periodic manner. Alternating current flows in cycle. The number of cycles per second is termed the frequency of current. In a 60 – cycle alternating current circuit, the current flows in one direction 60 times per second and in the other direction 60 times per second. Two frequencies are in use nowadays: the standard for Europe is 50 cycles per second, while the standard for the USA 60 cycles per second. A standard frequency has a great advantage since different electrical system can be interconnected.

Electric circuits.

Compare the schemes of two electric circuits (a) and (b). Circuit (a) is a series circuit. It includes a voltage source and two resistors. The elements in circuit (a) are connected in series. The value of current in one resistor equals the value of current in the second resistor. The value of current is the same in all elements of any series circuit while the value of voltage is different.

Circuit (b) is a parallel circuit. It includes a voltage source and two or three resistors. The resistors are connected in parallel. The value of voltage in one resistor equals the value of voltage in resistors two or three. The value of voltage is the same in all the elements of a parallel circuit while the value of current is different. In any circuit the conductor offers resistance to the flow of current.

The strength of current depends on both the voltage and on the resistance in a circuit. A current of 50ma is dangerous for a man, it may result in an electric shock. One gets an electric shock in case one touches live conductors when the power is on. And a current of 100ma and higher is lethal Thus, before working on a circuit, deenergize it and work on it with the power off. The risk of an electric shock decreases with decreasing voltage. In wet and hot atmosphere the risk of electric shock increases. Safe voltage for circuits used in dry atmosphere is under 36V. When the power is on contacts with live conductors are dangerous for life. When a live conductor is touched with both hands the resistance of the conductor I from 10,000 to 50,000ohms. The higher is the

body resistance, the smaller is the current that flows through the body. Take it into consideration and work with one hand if the power is on, or work on the circuit with the power off.

5. Заполните пропуски глаголами to offer, to connect, to include, to equal, to draw, to compare.

6. Переведите, обращая внимание на инфинитивные, причастные и герундиальные обороты:

Some scientists abroad are known to have attacked Franklin's point of view on the electric nature of lightning. It is proved that there exist two kinds of electricity, negative and positive. The lightning rod proved to be a most effective means of protection against the affects of lighting. A lot of scientists worked in the field of electricity, doing their best to make the life of people better. When electrons move through a wire, we say that the electricity is flowing along the wire.

Investigations being carried on in the field of physics, new possibilities for applying atomic energy are open.
